INSTRUCTIONS FOR FISH TRANSPORTERS

Authorization – The Fish Transporter Permit authorizes you to transport and sell commercially taken salmon, herring, or Pacific cod, and any fish legally taken in the harvest of those species, as an agent of the commercial fishermen who caught the fish. “Fish” is defined as fish legally harvested and retained in commercial salmon, herring or Pacific cod fisheries.

Keep the Fish Transporter Permit with you at all times during the transport and sale of fish. If requested by the fisherman, fish buyer, peace officer, or representative of the Alaska Department of Fish and Game (ADF&G), present the transporter permit for inspection and a photo identification card issued to you by a state or federal agency or other organization designated by ADF&G or Public Safety.

License and Permit Requirements – A person operating as a fish transporter must have a Fish Transporter Permit issued by ADF&G. Fish transporter permits expire on December 31 of the year in which they are issued, and must be renewed annually. Fish Transporter Permits are valid only for the person and vessel named on the permit; they may not be transferred or used by someone else. If you need to use a different vessel than the vessel on the permit, call 465-6131.

A vessel used to transport fish under the Fish Transporter Permit must have a valid commercial fishing vessel license issued by the Commercial Fisheries Entry Commission (CFEC). Vessel license application forms are available online at <http://www.cfec.state.ak.us/> or by calling (907) 789-6150. Under “20 - Types of Fishing Activity,” in Part B of the vessel license application form, check the “transporter” box.

The fish transporter and any crewmembers working on fish transport vessels must have crewmember licenses. Crewmember licenses may be purchased online from ADF&G at <http://www.admin.adfg.state.ak.us/license/>, through a license vendor, or by calling (907) 465-2376.

Transport of incidentally caught halibut and sablefish is regulated by NOAA Fisheries and must comply with IFQ regulations. Landing of IFQ halibut or sablefish must be reported electronically at the site of transfer. At-sea electronic reporting has not been possible for most vessels. If you are considering transporting IFQ species, contact your local NOAA Fisheries office or 800-304-4846 before accepting any fish.

Transport of any federally managed groundfish species, whether in the EEZ or state waters, also requires federal permits and additional federal reporting. For details and necessary permits contact your local NOAA Fisheries office or 800-304-4846.

Operating Requirements – Fish transporters must register, before transporting any fish, with the area management biologist or designated department representative for the area in which the fish are taken for transport. Fish transporters are required to familiarize themselves with the fish

ticket and other harvest reporting requirements for the area in which they will be transporting fish from and to comply with those requirements. Individual management areas may have differing reporting requirements. Contact the local ADF&G office in the area you intend to operate for area regulations, registration information and other requirements specific to that area.

Before moving to another area, or ceasing operations, a fish transporter must notify the area management biologist or designated department representative, in the area in which they have been transporting fish, when the transporter is ceasing operations or moving to another area.

Fish transporters may only transport fish from a person who holds a CFEC commercial fishing permit for the species, area, and gear type used to harvest the fish being transported, or a landing permit issued by CFEC.

In the Bristol Bay management area, a fishing vessel registered to fish in Bristol Bay may not transport salmon outside the boundaries of the fishing district in which the fish were harvested. A fishing vessel registered in Bristol Bay may transport fish for permit holders to a processing plant or buyer within the fishing district in which the fish were harvested. A vessel not registered to fish in Bristol Bay that does not have fishing gear on board, may transport to other fishing districts. **Contact ADF&G in Dillingham (907-842-5227) before operating as a fish transporter in Bristol Bay to get the latest updates on these restrictions.**

A fish transporter may not be used to transport wild herring spawn on kelp in the Norton Sound District. Current regulations, 5 AAC 27.934 (a) (3), define the harvesting of wild herring spawn on kelp to include transporting to a licensed buyer or tender. Therefore, only the CFEC permit holder harvesting the spawn on kelp may transport the product to a buyer or tender.

Fish Ticket Reporting Requirements – As a fish transporter, you are responsible for writing fish tickets for all fish taken onboard your vessel. Fish transporters are required to familiarize themselves with the fish ticket and other harvest reporting requirements for the area in which they will be transporting fish and to comply with those requirements. Individual management areas may have differing reporting requirements.

Use the correct fish ticket form for the particular area and species of fish transported. Blank fish ticket forms will be provided free of charge by ADF&G. For additional fish ticket forms, or if you have questions about which ticket to use, call (907) 465-6131. Fish transporters will not be issued metal code plates.

Write a separate fish ticket for each fisherman's fish (if you are transporting fish for more than one person) each time you accept those fish for transport. At that time, the commercial fisherman must provide to you all of the information required to complete the fish ticket (including but not limited to statistical area of harvest, catch dates, vessel ADF&G number, CFEC permit information, accurate number and/or weight of fish by species, etc.). Do not accept fish from a fisherman who does not have a valid commercial fishing permit card issued by CFEC. The number of fish by species and the weights of fish by species must be estimated and recorded on the fish ticket. Final weights and fish counts must be verified upon delivery of the fish to a fish buyer or processor. When the required information has been filled out on the fish ticket, the fisherman must sign the ticket. If required for the species and area, attach the fisherman's logbook to the fish ticket. Check with the local ADF&G office for specific requirements.

Imprint the fisherman's plastic CFEC permit card on the fish ticket in the space provided. Imprinting machines are optional, but can be purchased from Secure ID (907-770-9160) or Legend Data Systems (425-251-1670) for about \$160. If an imprinting machine is not used, the transporter is responsible for making sure the imprinted information is clear and legible. ADF&G will not accept fish tickets that have CFEC permit information written by hand and will not accept illegible fish tickets. Fish transporters may not have incomplete fish tickets that have been imprinted with a CFEC permit number or signed by a fisherman before fish are delivered to the transporting vessel.

Write your Fish Transporter Permit code number, your vessel ADF&G number, and sign your name in a blank area near the top of the fish ticket. Do not write your fish transporter vessel ADF&G number in the box labeled "ADF&G NO." This box is reserved for the fisherman's vessel number. Do not write your Fish Transporter Permit code number in the space labeled "Proc. Code" or "Company." These spaces are reserved for the fish buyer.

Keep all copies of the fish ticket onboard the fish transporter until the fish are sold. Present the fish ticket to the buyer at the time of sale.

Fish tickets must be submitted to a local representative of the department within 7 days after landing per 5AAC 39.130(c), or as otherwise specified by the department for each particular area and fishery. Check with the local ADF&G area office for specific requirements.

In addition to state fish ticket requirements, fish transporters must comply with any federal reporting requirements for IFQ and federally managed groundfish fisheries.

Transporting for Catcher/Sellers – If a fish transporter is transporting and selling fish for a catcher/seller, the catcher/seller's metal code plate must be imprinted on the fish ticket and the catcher/seller must sign the fish ticket at the time the transporter accepts fish from the catcher/seller. Fish transported for a catcher/seller can only be sold from the fish transporter's vessel or at the dock to the general public for use for noncommercial purposes; for use as bait for commercial or noncommercial purposes; or to restaurants, grocery stores, and established fish markets. (These facilities must have a processing waiver from the Alaska Department of Environmental Conservation in order for a Catcher/Seller to sell to them.)

Incidental Catch or Partial Delivery – If only a portion of the fisherman's catch is given to the transporter, the fish transporter must fill out the "Ticket #" and "Processor Name" lines on the "PARTIAL DELIVERY" portion of the fish ticket. The fisherman must also complete the "PARTIAL DELIVERY" information on the fish ticket for any catch he or she retains.

Transport of incidentally caught halibut and sablefish is regulated by NOAA Fisheries and must comply with IFQ regulations. Landing of IFQ halibut or sablefish must be reported electronically at the site of transfer. At-sea electronic reporting has not been possible for most vessels. If you are considering transporting IFQ species, contact your local NOAA Fisheries office or 800-304-4846 before accepting any fish.

Transport of any federally managed groundfish species, whether in the EEZ or state waters, also requires federal permits and additional federal reporting. For details and necessary permits contact your local NOAA Fisheries office or 800-304-4846.

Wanton Waste of Fish – The fisherman retains ownership of the fish while the fish is being transported to a buyer. If fish is wasted or dumped overboard, the person who does the wasting or dumping is liable for the penalty associated with wanton waste of fish, regardless of who owns the fish.

Contracts between Fishermen and Transporters – Business arrangements between fishermen and transporters should be established in a contract. ADF&G will not be liable for any disagreements, loss of fish, degradation of fish quality or value in transport, or breach of contract between the fishermen and fish transporters.

Other Requirements – In addition to the requirements listed in these instructions, fish transporters must adhere to all other Alaska statutes and regulations regarding commercial fishing, vessel operation, licensing and permitting, transport of fish across management area boundaries, and record keeping and reporting. Fish transporters will be liable for any undersized or illegal fish on board their vessel.

Are you a permitted fisherman in any of the fisheries you indicated on the previous page?

Yes No

If yes, indicate the fishery and your CFEC permit/gear card number(s) below:

Indicate the number of books of each type of fish ticket you need:

(Tickets, except B, are packaged in books of 25)

General Salmon (A) _____ Troll Salmon (J)_____ Herring (H) _____

Bristol Bay Salmon (B)_____ Groundfish (G)_____

I certify under penalty of perjury that I only transport fish for commercial fisherman for sale to licensed buyers, or for sale as an agent of a catcher/seller. I am not authorized to export any fish out of state or to process fish under this permit. If the intent of my operation changes, I will notify the Alaska Department of Fish and Game and obtain any additional required permits at that time.

I have read and agree to abide by the guidelines set out in the Instructions for Fish Transporters.

Signature of transporter
